

COMET Agreements Executed in September 2009

State	Applicant organisation	Project / Product	Agreed funding (including GST)	Detailed description	Contact	Phone
ACT	CIC Technology Pty Ltd	Key Security System	70,400	CIC Technology Pty Ltd has developed a next generation key security system, C.Q.R.iT that links physical key management with an organisation's computing security systems and central management consoles. The C.Q.R.iT system software architecture allows integration with multiple systems to ensure secure tracking of keys across multiple sites. The system can be structured to allow offerings from small discrete secure solutions that are cost effective up to large enterprise systems that offer high level security 24/7 and 365 days a year. COMET funding will be used for Strategic Business Planning, Market Research, Intellectual Property Strategy and Proven Technology activities.	Carol Cooke Judith Cooke	02 6232 0606
NSW	Billsuite Holdings Pty Ltd	Telecommunications bill analysis, recommendation and broker software platform.	70,400	Billsuite Holdings Pty Ltd has developed an automated end-to-end process (available online as software-as-a-service or as licensable software) that reads and analyses uploaded telecoms bills, recommends/ranks the best plans and providers based on the customer's specific service usage patterns, and even completes orders by interfacing with telecoms service provider sales systems to create a seamless online broker service. The analysis covers all services (fixed line, mobile, data) and nearly all the providers in the Australian market. The platform can also be used within organisations to better analyse and manage their telecoms costs. Telecoms providers can use the platform to provide information and recommendations to assist sales teams win and retain business through superior insight into customers' service usage. The platform can be configured for use in other countries, by specifying the service plans and billing formats used by the telecoms providers in those countries. COMET funding will be used for Management Skills Development, Strategic Business Planning, Market Research, Intellectual Property Strategies and Proven Technology.	Sam Ayad	0409 362 007

NSW	Just OnePlace Pty Ltd	Supply chain collaboration solution for fast-moving consumer goods industries.	70,400	Just OnePlace Pty Ltd has developed a web-based product lifecycle and supply chain management solution 'OnePlace' for fast-moving consumer goods industries like clothing, footwear and furniture. The software has been specially designed to support the variety, short lifecycles, seasonality and visualisation of products in these industries. It enables efficient and flexible collaboration along the supply chain between retailers, distributors, importers/exporters, designers and manufacturers. It helps manage creative processes like product specification and design, also logistics processes like ordering and delivery. It embeds best practices and captures and reuses knowledge through form templates, process archiving and search functions. It interfaces easily with enterprise resource planning and financial systems. COMET funding will be used for Management Team Development, Strategic Business Planning, Market Research, Intellectual Property Strategy and Proven Technology activities.	Winston Teperson	02 9922 1299
NSW	Medinexus Pty Ltd	Online integrated diagnostic report and image messaging and collaboration service.	70,400	Medinexus Pty Ltd has developed a secure online messaging and collaboration service for providers of diagnostic reports and discharge summaries with images to use with their referring general practitioners, medical specialists, dentists and allied health care providers. Medinexus is currently focussed on providing the service to radiology clinics and hospitals, providing a convenient and easy-to-use service for referrers to access radiology images and reports for their patients. Medinexus creates the best possible opportunity for radiology clinics and hospitals to reduce the use of film and its associated costs, as well as offering a better and more convenient service to referrers. COMET funding will be used for Strategic Business Plan Development, Market Research, Intellectual Property Strategies, Working Prototype and Proven Technology.	Jonathan Klug	1300 796 959
NSW	Silenceair International Pty Limited	Passive (zero energy) noise-attenuating ventilators for buildings.	70,400	Silenceair International Pty Limited has developed Silenceair™ a range of passive acoustic noise-ventilators for insertion in walls, doors and windows. The ventilators allow good air flow but stop around 85% of airborne noise being transmitted. The ventilators do not have moving parts, do not consume energy and can be made from recyclable and biodegradable materials that provide fresh air without noise or energy consumption. COMET funds will be used for Strategic Business Planning, Market Research, Intellectual Property Strategy, Working Prototype and Proven Technology activities.	Christopher Matthews	02 9555 7215

QLD	BOAB Software Pty Ltd	Stores project, client and sample information for geotechnical laboratories.	70,400	BOAB Software Pty Ltd has developed Helpa Version 6 (Higher Level Engineering Laboratory Productivity Application), a laboratory Information Management System that stores project, client and sample information for geotechnical laboratories relating to soils, concrete and asphalt testing facilities, calculates and stores test results for any given project and reports test results in either a pre-set format or in a layout developed by the individual company. COMET funding will be used for Management Skills Development, Strategic Business Plan Development, Market Research and Intellectual Property strategies.	Tim Hall	0429 778 370
QLD	EVA Robotics Pty Ltd	EvoDrive stepper motor control system.	70,400	EVA Robotics Pty Ltd has developed the EvoDrive ST-17, a stepper motor controller intended for use in high performance robotics and other automated products. The EvoDrive ST-17 provides unprecedented levels of control to product designers, essentially turning cheap sub-horsepower stepper motors into high performance servo motors. COMET funding will be used for Management Skills Development, Strategic Business Planning, Market Research, Working Prototype and Proven Technology activities.	Matthew Alder	0414 859 602
QLD	Event Zero Pty Ltd	Event Processing Network	70,400	Event Zero Pty Ltd has developed the Event Processing Network suite of products called Event Center, based on complex event processing, real time operational intelligence and a business activity monitoring platform. The Event Center offers comprehensive functionality across all parts of the event processing lifestyle - data capture, processing and analysis, interaction and response. Event Center provides, in a single product, all of the capability required to capture event data from a wide variety of (potentially distributed) data sources, including the execution of complex real time, historical and blended analysis (business rules, logic, algorithmic processing). COMET funding will be used for Market Research, Intellectual Property Strategy and Working Prototype activities.	David Tucker	07 3340 9100
QLD	Floyds (QLD) Pty Ltd	Stemming truck with water cart and dust suppression to the delivery conveyors.	70,400	Floyds (QLD) Pty Ltd has developed "StemSafe" that offers blast hole stemming trucks with water cart capability and dust suppression supplied to the delivery conveyors via micro sprays. The dust suppression sprays on StemSafe trucks drastically reduce silica dust, whilst quality stemming optimises the performance of explosive product through superior confinement. This allows bigger blast patterns or small drill bit diameters for a significant cost saving with the same, or better, fragmentation of coal. COMET funds will be used for Management Skills Development, Strategic Business Planning, Export Strategy, Market Research and Intellectual Property Strategy activities.	Andrew Wheeler	0428 447 306

QLD	Zen Automation Technology Pty Ltd	Vision controlled robotic labeller for horticulture industry.	70,400	Zen Automation Technology Pty Ltd has developed a robotic labeller for growers of certain fruit and vegetables. The labeller is a small and fast moving intelligent robot which has been integrated with a machine vision and laser sensing system. As crates are fed into the robotic labelling station by a conveyor, a laser scanner inspects the produce packed and a 3D image of the product packing pattern, size and number is generated. Simultaneously a colour vision system inspects the crate to identify which retailer the products are to be packed for. Then correct labels are selected by the robot from the appropriate label cartridges and placed to the top centre of each individual fruit or vegetable. COMET funding will be used for Management Skills Development, Strategic Business Planning, Market Research, Intellectual Property Strategy and Working Prototype activities.	Andrew Hinsch	0439 075 343
SA	Lifebelt Pty Limited	A novel integrated, universal seatbelt to prevent ejection from a seat in an accident.	70,400	Lifebelt Pty Limited has developed a universal integrated automobile seatbelt, similar in use and appearance to an existing 3 point belt to prevent ejection out of a seat in a crash. Lifebelt Pty Limited was established by surgeons, who have treated patients with seatbelt injuries, to address key problems with current seatbelts. Lifebelt has been designed to be as effective as existing seatbelts while also addressing key injuries of existing seatbelt designs. The Lifebelt is also self adjusting and able to fit all size humans, including pregnant women. COMET funding will be used for Management Team Development, Strategic Business Plan Development, Market Research, Intellectual Property Strategies, Working Prototype and Proven Technology.	Lino Fusco	0413 984 938
SA	ProScales Pty Ltd	A weighing and labelling solution to more efficiently and flexibly print label and advertising information.	70,400	ProScales Pty Ltd has developed a weighing and labelling system targeted at the food industry which, via its unique user interface, enables a more efficient and flexible method to print product and contextual information on a label. This system (the LabelPro) is targeted at food wholesalers and the additional AdPro system, featuring advertising capabilities, is targeted at food retailers. The systems allow companies to quickly weigh and inventory their products, reduce perishable waste by clearing stock or sales steering and reduce label costs by creating their own label formats without the need for specialised pre-printed labels. COMET funding will be used for Management Skills Development, Strategic Business Planning, Export Strategy, Market Research, Intellectual Property Strategy, Working Prototype and Proven Technology activities.	Stephen Heaney	0410 645 042

VIC	Can-Tek Aerosols Pty Ltd	Water based, high gloss enamel paint spray handy can product.	70,400	<p>Can-Tek Aerosols Pty Ltd has been exclusively licensed to produce a water based, high gloss enamel, handy spray can range of paints. This product has a number of desirable aspects from other products currently available:</p> <ul style="list-style-type: none">- Environmentally friendly, with very low toxicity, and can be used in confined spaces.- Human friendly, a deterrent for solvent abuse or chroming.- Uses a bio fuel based propellant to replace LPG.- Is non-flammable. <p>COMET funding will be used for Strategic Business Plan Development, Market Research, Intellectual Property Strategies, to finalise Working Prototype and Proven Technology.</p>	Ross Brinsdon	0413 736 762 03 9796 7020
VIC	VFX Systems Pty Ltd	'V-Machine' - Stand alone Virtual Studio Technology (VST) player for music enhancement.	70,400	<p>VFX Systems Pty. Ltd. has developed the 'V-Machine', designed to enhance music and is ideally suited to live performances. It provides musicians, engineers, producers, and guitarists a purpose built product to run Virtual Studio Technology (VST) plug-ins. As a small box, it can sit on top of an audio keyboard, and can link to any Musical Instrument Digital Interface (MIDI) device. It runs VST plug-ins to synthesize the audio output, and therefore can generate many thousands of different instruments and effects. In addition to the hardware product, VFX Systems has developed both MAC and PC software suites to allow the user to manage the V-Machine. This software is used to load and configure plug-ins on the device, and to set up groups or banks of effects. COMET funding will be used for Strategic Business Plan Development and Market Research.</p>	Jefferson Harcourt	03 8459 6999
